

realKNX – Voice Control and Automation with Node-RED and Snips

realKNX – Plug&Play Voice control with augmented reality and dashboard

extends proServ with additional powerful functionalities:

- Visual programming with Node-RED, no programming skills required.
- Create powerful tasks: *“if someone is in the garden and I’m away, play vicious dog on SONOS speakers”* or *“when I’m away, turn on the lights as if I was home.”*
- Voice control through Snips, Siri, Alexa and Google Home.
- Geo-fencing and automation.
- Modern Dashboard with controls and graphical data presentation in browser.
- Dashboard connection with remoteConnect from anywhere – no VPN, no port forwarding.
- Augmented reality, Data logging, scheduling, sonos driver, email alarm, VPN server and more...

Offline voice control with Snips

realKNX Air is the first offline voice control system for KNX, it works without cloud services. The advantages of offline:

- Your privacy is guaranteed, nothing you say will leave the room, it is Private-by-Design
- Quick and easy installation, no need to set up an online account
- The vocabulary is added dynamically
- No updates are required
- The voice commands and possibilities of sentences and questions can also be adapted to any special requests
- Commands and queries for lighting, shutters, HVAC and media systems may be intuitively spoken in hundreds of different ways
