

ProKNX Launches Aragon, a Unique Offline Voice Control System for Homes

ProKNX Announces the World First Wall Mounted Voice Control System, Compatible With Major Home Automation Systems, Privacy Guaranteed.

SOPHIA ANTIPOLIS, FRANCE, December 3, 2019

(Newswire.com) - ProKNX, a French startup specialized in home automation systems, announced another world's first today, with the development of Aragon. Aragon is a **unique** product in this area, it is the first internet-free voice assistant fitting into a flush-mounted box. With an existing compatible home automation system in place, the user would typically install one Aragon device in each room where voice control is desired.

Aragon is part of the product line that works with **Snips** (now Sonos), which does not require any cloud services. This means Aragon is not depending on an internet connection, and there is no need to create a cloud account. Furthermore, software updates out of the user's control are never imposed. Aragon was designed to protect the user's privacy; it is designed according to the privacy-by-design model. What is said is neither recorded nor stored, all software runs directly on the device. What is said at home, stays at home.

One of the outstanding properties of Aragon is its size. Aragon has been designed to fit in a **flush-mounted in-wall box**. It is compatible with many switch fronts of different manufacturers. Furthermore, it is connected through standard Power over Ethernet which allows a single cable to provide both, data connection and electric power to the device. The installation is seamless, plug & play, and automatic. Aragon integrates with major home automation servers.

This first release of Aragon will be available in three languages: **French, German** and **English**.

About ProKNX:

ProKNX SAS is a company based in Sophia-Antipolis in the South of France that has been active in the home automation sector for more than ten years. In the recent years, ProKNX has specialized in the area of voice control. Meanwhile, several products and innovations have emerged. Aragon is the latest innovation in this field.
