

Weather forecast and date / time

In the proServ product database in the "Global functions" area functions can be activated, which

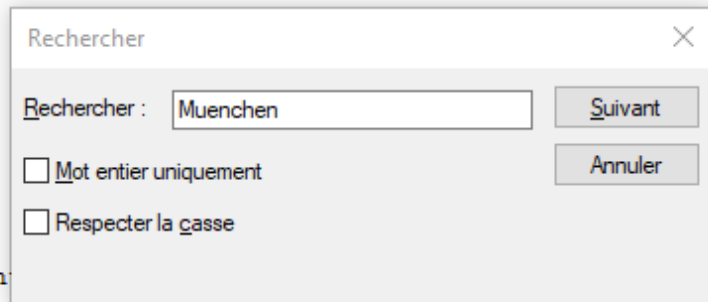

- send the current time to the bus as soon as the iKnix or iKnix2 app is called up
- enables the weather forecast for the next few days

For this, an ID must be entered, to define the place of residence of the installation. Please download the following file:

<https://proknx.com/download/openweathermap/city.list.zip>

The file can be opened with a text editor. The location of the installation can then be searched.

```
        "lon": 16.17734,  
        "lat": 48.182732  
    }  
},  
{  
    "id": 2867714,  
    "name": "Muenchen",  
    "country": "DE",  
    "coord": {  
        "lon": 11.57549,  
        "lat": 48.137428  
    }  
},  
{  
    "id": 2971548,  
    "name": "Arrondissement",  
    "country": "FR",
```

The screenshot shows a search dialog box with the title "Rechercher" and a close button (X). The dialog contains a search input field with the text "Muenchen" entered. Below the input field are two checkboxes: "Mot entier uniquement" and "Respecter la casse", both of which are currently unchecked. To the right of the input field are two buttons: "Suivant" and "Annuler".

Please enter the „id“ in the field of Code (weather.com)
