

# proServ

The world's first controller that permits to configure the User Interface for iOS or Android devices with ETS.

## Functions and Operation

- No graphical editor, no internet, no additional configuration files necessary, only ETS3, ETS4 or ETS5.
- Configuration stored locally in your proServ controller.
- Just connect an iPhone, iPad or Android tablet – and get it configured in seconds.
- No software license or hidden fees, free app on apple store or Android market. Connect up to 10 devices simultaneously and completely bidirectional.
- Different user profiles in the same configuration available.
- No limits in KNX functionality: Control lights, blinds, shutters, save and recall scenes, check and set temperatures or modes for HVAC, view weather station and all kind of KNX metering values.
- Switch with one touch to your favorite IP camera or music app.
- No bus traffic evokes when the client connects, as proServ is always online and knows the state of every bus device.
- proServ is green: Only 800 mW power consumption.
- Awesome graphics and intuitive user interface.
- Combine the same controller for complete Audio/Video and KNX integration with RTI and bitwise controls, see short vidéo on SONOS integration.
- Use the proServ controller additionally as IP programming interface for ETS, remote access possible.

Save Energy.
