realKNX v3.2 release info

You receive this email from ProKNX Dev, because you signed up on our website or made a purchase from us.

The 'Developer emails' will be kept short and to the point and only when we have relevant information to share with you.

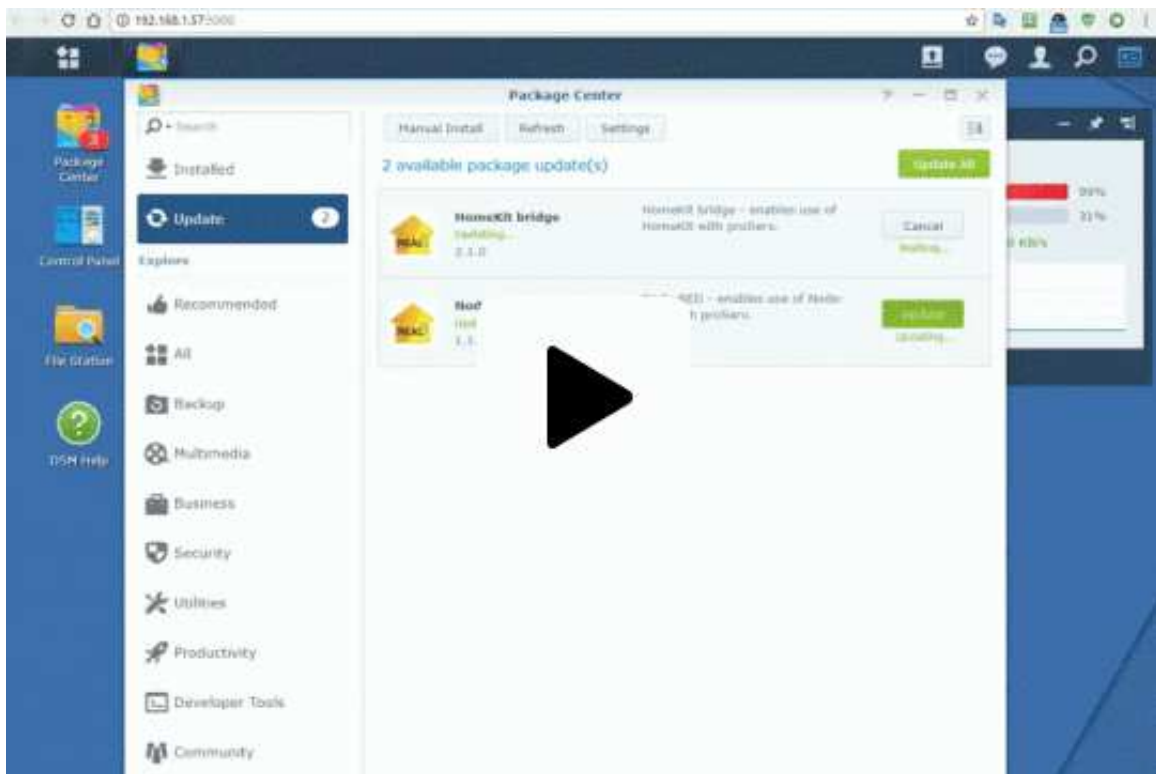

Changes in realKNX v3.2

realKNX v3.2 is available for download and installation. This release focuses on usability and stability:

- Upgrade Node.js to v6.
- Upgrade Node-RED to v0.17.5 ([release info](#))
- Added Refresh Devices button for Google Home ([github](#))
- Fixed an issue with remoteConnect ([github](#))
- Fixed some issues with Smart Charts ([github](#))
- Added Hard reset of Node-RED (delete flows)

This video will walk you through the upgrade process:

Notes (video time)

Link to [video channel](#)

[0:00](#) This update is not entirely automatic and will require your attention. In particular:

[0:50](#) Enable beta versions (to be able to install NodeJs v6).

[2:14](#) NodeJs v4 must be uninstalled manually by you!

[2:34](#) Then you need to 'Update all' again.

[2:53](#) proServX upgrade will be much longer than in the screencast.

[3:25](#) Node-RED upgrade will be much longer than in the screencast.

[3:40](#) Bring up the Resource Monitor to see the CPU activity (optional). As long as the CPU stays red, it's working with the update.

[4:43](#) HomeKit bridge must be manually started (optional, if you don't plan to use it, leave it stopped).

[5:18](#) The system restart is strongly recommended and will take 5-7 minutes to complete. It will be much longer than in the screencast.

[6:10](#) If you're not planning to use Alexa/Google Home via bridge, we recommend that you stop it to save memory.

[6:10](#) Google Home and Alexa will still be available via 'Action' and 'Skill'.
